

Tool Talk Safety Meeting

August 3, 2020

Secure Your Load

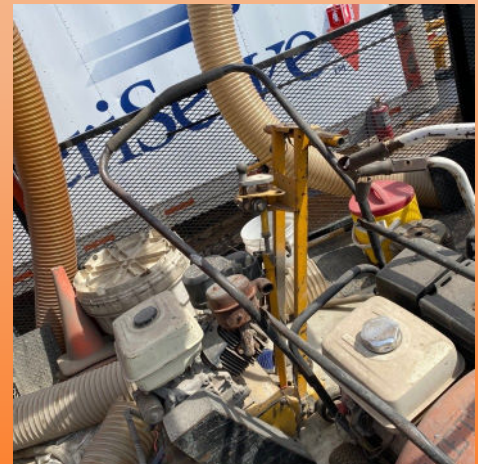

Disorganized truck beds and unsecured loads are a hazard to you and others. Unsecured equipment and materials can fall from the deck and cause a crash or injury.

An unorganized deck with an unsecured load also creates more work for the team and makes the job less safe.

Secure your load and check to be sure that your load remains secure throughout the day. Everything has its place; small equipment, measuring wheels, layout ropes, spray paint cans should not be strewn on the deck. All equipment, tools, and material is to be secure and accessible. There should be nothing that could become dislodged or fly off the deck.

A secure load will improve safety and in the long run save time and reduce cost.
